

Lewis Joseph Feik  
Security Awareness  
About me

My name is Lewis, and I am pursuing a career in **cybersecurity**, with a strong interest in becoming a **Security Awareness Officer**. I am passionate about helping individuals and organizations understand the human side of cybersecurity, especially how education and awareness can reduce the risks posed by phishing, social engineering, and malware.

My background includes a 2 year associates degree in cybersecurity, In my Github Profile I acquire hands-on labs using Cisco Packet Tracer also labs from Cisco Networking Academy . Looking ahead, my career goal is to specialize in **security awareness and training programs** that help communities, nonprofits, and small businesses protect themselves against evolving threats. I hope to earn industry certifications like CompTIA Security+ and CISSP, which will help me grow into roles where I can design security awareness campaigns, conduct training workshops, and serve as a trusted advisor for organizations. My long-term goal is to combine technical expertise with communication skills to bridge the gap between cybersecurity professionals and everyday users.
